

IN-HOUSE TRAINING · COURSE CONTENT

Project Management / SCM

Thematic Training · 2 days (14 h)

You will learn the collaborative work tools: installing, configuring and using the Source Code Manager (SCM). You will learn to organize the Control Centers, manage a project, manage rights and development teams, set up project versioning, manage user feedback, etc. locally, remotely and in the cloud.

Prerequisites (Who is this training course intended for?)

Target audience: developers and project managers wishing to set up collaborative work and versioning (SCM, Control Centers).

Prerequisite: have a good knowledge of the PCSoft development environments or have previously attended a Fundamentals 1 training course.

Practical information

Format
In-house

PCSoft Level
Level 2

Duration
2 days (14 h)

Price
Flat rate for 1 to 8 developers on-site and 1 to 6 remote.

Training Provider Registration Number (NDA)

Detailed Program

The following is the suggested content of this training session:
(This content can be fully customized)

The instructor uses the course materials, which are tailored to the training objectives (the materials are provided at the beginning of the course). This course support material is divided into subjects.

All of these methods and exercises will help you put into practice what you have learned, when you return to your company.

Each subject is based on 3 axes:

Axis 1

The trainer gives a theoretical presentation of the topic, followed by any questions and answers.

Axis 2

Practical application exercise (individual work) to be completed within a set time limit. The trainer remains available to help and provide additional explanations.

Axis 3

Correction of the exercise, with all necessary explanations and any questions and answers. The trainer makes sure that each trainee has fully understood the exercise before continuing.

Project Management / SCM

2 days (14 hours)

OBJECTIVES

- Use the Source Code Manager (topic 3)
- Use the Control Centers (topics 1, 2)

CONTENT

Topic 1. The Control Centers — 2 h

- Managing a project: organizing, estimating and assigning everyone's tasks (Control Centers, Task scheduling)
- Setting up your work method (Agile, Scrum, XP, ...)
- Controlling delivery deadlines (Burn down chart, Gantt chart, Task dependencies) (new features)
- Monitoring development teams, controlling delivery deadlines and anticipating schedule overruns (Sprints, Impact analysis, ...)
- Managing user feedback and using spools (customer requests, incident management)

Topic 2. The development-oriented internal messaging mailbox — 30 min

- Sharing information within the team with development-oriented messaging tools (automatic notifications, shared information, ...)

Topic 3. The Source Code Manager — 11 h 30

- Installing and configuring a local SCM server.
- Using an SCM in the Cloud to access your projects from anywhere
- Setting up collaborative work so that several developers can work on the same projects (SCM): centralizing all software resources (sources, UI & UX, analysis,...)
- Studying the code quality metrics approach (comment rate, mandatory tests, check-in policy,...)
- Managing everyone's rights on projects (locking)
- Factoring code and improving maintenance by sharing elements
- Mastering application versioning and responding effectively to software regressions:
- Development branches,
- Labeling (labels, tagging, version traceability),
- History restoration (rolling back to an earlier version),
- Identifying differences between source versions. Merging (merge, cherry-picking) sources
- Maintaining high availability through mobile development
- Maintaining and securing source databases (backup, purge, restoration)

Teaching, technical and supervisory resources

In-person in-house training

Each participant is equipped with:

- printed course materials
- a notebook
- a pen

The instructor leading the training is an experienced PCSoft employee.

In-house Online Training

During the training, you will be in constant contact with the trainer via the GoTo Meeting (©) software, which allows you to share your screen and the trainer's screen. You will connect to the workstations using RustDesk (©); the trainer will provide you with the login information on the first day of the training.

You can also interact with the other participants to foster a friendly atmosphere during the training and promote productive technical discussions.

The course materials (PDF format) are sent to you with the joining instructions before the training begins.

Arrangements

Price	Flat rate for 1 to 8 developers on-site and 1 to 6 remote. Ask us for a free quote.
Financing	skills development plan, OPCO, direct funding.
Agreement	A detailed training agreement is available upon request.
General conditions	PCSoft's general terms and conditions and specific training terms and conditions apply. General Terms and Conditions Special Terms and Conditions of Service
Rules and Regulations	Please review the rules and regulations for trainees at the PCSoft training center. Rules and Regulations Procedure for the Prevention and Handling of Violence, Harassment, and Discrimination

Methods for monitoring the execution of the training session

At the end of the training course, participants' mastery of the skills is assessed through a multiple-choice test. Non-certification, non-degree program—certificate of completion.

Prices and VAT

It all depends on where you live:

- Mainland France: The training is subject to French VAT (20% as of 01/01/2014).
- Overseas Departments (DOM): The VAT rate (known as "octroi de mer") varies by DOM (Martinique, Guadeloupe, and Réunion: 8.5%; French Guiana: VAT-exempt).
- COM and POM: excluding tax.
- EEC: Invoicing excluding tax (provide the European VAT number).
- Other countries (outside the EEC): excluding tax.

Accessibility

PCSoft is particularly committed to including people with disabilities in its training programs.
